

COULD IT BE **SKIN** CANCER?

Question the Marks on Your Skin.

- Learn about Skin Cancer Facts & Statistics
- Understand the Causes and Risk Factors
- Recognize the Signs & Symptoms

KNOWLEDGE IS YOUR BEST DEFENSE.

AIMATSKINCANCER.ORG

HERE'S HOW TO LOWER YOUR RISK:

Always cover up and wear sunscreen of an SPF of 30 or above.

Regularly examine your skin from head to toe for new spots, changes in moles or irregularities.

See something new, changing, or irregular? It could be skin cancer. See your healthcare provider or dermatologist.

HERE'S WHAT SKIN CANCER LOOKS LIKE:

BASAL CELL CARCINOMA

Most Common Type of Skin Cancer

These growths form in the outermost layer of the skin. This type of skin cancer generally never spreads to other parts of the skin.

SQUAMOUS CELL CARCINOMA

Second Most Common Type of Skin Cancer

Can appear on any part of the body, but typically forms on areas exposed to the sun. If it remains untreated, it can become deadly.

MELANOMA

The Deadliest Form of Skin Cancer

Melanoma is the most serious type of skin cancer. Often the first sign of melanoma is a change in the size, shape, color, or feel of a mole.
